XY SENSE

Workplace Experience

Use sensor data to create a workplace your team loves

Every workplace and team is unique and so are their space needs. With XY Sense you can navigate the intersection of people and place, resolving friction points and targeting initiatives towards an improved experience.

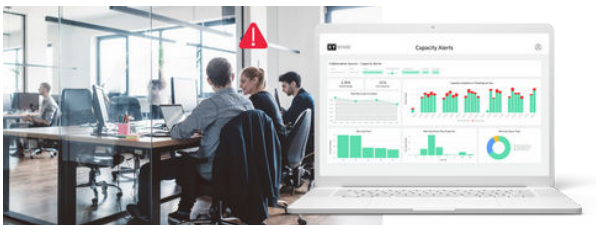
Best of all, our anonymous XY coordinate data means understanding workplace experience without excessive surveys or a lack of privacy for your team.

Make it simpler to find a desk or meeting room

Know what's in use in real-time and remove the hassle from 'checking in' to room and desk bookings. XY Sense can capture the anonymous coordinates of space users accurate to 1ft every 2 seconds. This means you can offer next-generation desk and space booking kiosks and alerts for team members. No-shows will never be a problem again.

Unlock behavioral workplace insights

What days are meeting rooms most busy? Is anyone actually using that row of stand-up desks? XY Sense gives you the ability to understand the intricacies of how team members interact with your workspace environment. Understand travel times between zones, high traffic areas and sit/stand behaviours to empower smarter decision making and planning.



Ensure safer spaces in the era of COVID-19

Navigate the complexities of returning to office by helping team members to choose safe seating based on real-time occupancy feeds from XY Sense. Unlike static floor plans or stickers, XY Sense can update booking tools based on current usage and capacity in a given space. XY Sense can also monitor and act on social distancing breaches, delivering custom text alerts to people in a geofenced area.

Create workplaces which teams thrive in

Create spaces people enjoy working in with the meaningful data provided by our Area Sensor and Insights Platform. Make powerful discoveries through data-driven space and design experimentation so you can customize space configurations depending on the team or function.

The XY Sense difference

Powered by the latest developments in machine learning, XY Sense delivers the ultimate privacy-preserving sensor for workplace teams. Featuring enormous sensor coverage, live data feeds, advanced AI capabilities and cost-effective install options, XY Sense helps workplace teams maximize ROI from a sensor investment.
